

OUR CHEMICAL SERVICES

Regulatory and scientific support:
Mastering your challenges of today
and tomorrow

**Hands-on scientific
and regulatory
expertise within
your reach**

Since entering into force of the EU REACH Regulation (EC) No 1907/2006 in 2007, companies manufacturing or importing chemicals into the EU need to register their substances before placing them on the EU market. This affects chemical substances with intended release in quantities above 1000 kg per year as well as substances in a mixture or in articles.

However, REACH is not the only regulatory challenge for chemicals in the EU. The chemical regulatory environment remains dynamic. With the EU Green Deal and its objectives for a climate-neutral Europe, a substantial revision of the existing regulations can be expected, including further increase in registration data requirements as well as addressing several challenging issues, such as, polymers, substances of concern, endocrine disruptors and nanomaterials.

OUR SERVICES

Our experts are well-versed in all aspects of REACH and related regulations and have in-depth knowledge of notification and registration processes and the associated data requirements. We can support you with the registration of all types of substances such as mono- and multi-constituent substances, nanomaterials and UVCBs, both inorganic and organic.

Registration Support

We offer you cost-effective, tailored solutions for the complete registration process of your chemicals in the EU and internationally. This includes chemical hazard, exposure and risk assessment as well as analogue approaches, strategies for PBT/PMT substances, read-across strategies and QSAR-modelling to waive testing.

In cooperation with international GLP-certified laboratories, we can offer you testing packages at highly competitive prices, including professional and independent monitoring by SCC experts.

Our chemical registration services at a glance:

- Analysis of your product portfolio and development of an effective tailor-made registration strategy
- Dossier preparation and submission, including updates for tonnage-band increases
- Defending your submissions and liaising with ECHA and other authorities
- Monitoring and defending your substances under CoRAP, SVHC, Restriction and Authorisation

Services under CLP

Further to our registration support, we help you comply with your notification obligations under the CLP Regulation (EC) No 1272/2008.

Our services include:

- Expert service in the RAC CLH process and representing clients at ECHA RAC meetings
- Compiling Harmonised Classification and Labelling (CLH) dossiers
- Preparing and submitting Classification and Labelling (C&L) Inventory notifications
- Offering full support with Poison Centres Notification and CLP Regulation (EC 1272/2008)
- SCIP Notification, including identification of the articles containing substances of very high concern (SVHC), reviewing available data, preparing and submitting information to the database.

International chemicals regulations

Over the years, we have built up our expertise and established an extensive network of partners and associates in various countries to guarantee our customers access to top-qualified and first-hand expertise in their target markets, such as:

- **The United Kingdom**

Through our local legal entity in the UK, we offer full-scale representative services. We closely monitor recent developments in the UK REACH and CLP legislation to ensure our regulatory know-how is always up to date.

- **Turkey**

Together with our local partner, we offer comprehensive support for the KKDİK registration services, including OR services.

- **South Korea**

In cooperation with our exclusive local partner, we offer full-scale K-REACH services, including OR and consortia management support.

- **Japan**

SCC Japan offers full-scale scientific and regulatory services for chemicals on the Japanese market.

Supply Chain Services

Supply chain management is an essential part of chemicals compliance, requiring communication and transparency among the supply chain stakeholders. Businesses exporting to the EU are responsible for complying with REACH and other requirements, making necessary notifications and sharing accurate and detailed data within their supply chain.

Safety Data Sheets (SDS)

In the EU, manufacturers and importers of hazardous chemicals are required to prepare standardised safety data sheets (SDS) in line with REACH and GHS, the Globally Harmonised System of Classification and Labelling of Chemicals.

An SDS provides information on product identity, health and physical hazards, safe handling and storage guidelines as well as emergency procedures and disposal considerations.

In cooperation with our partner, [GBK GmbH Global Regulatory Compliance](#), we can advise you on SDS compliance, prepare and review your data sheets as well as produce annexed exposure scenarios (eSDS).

Transportation

Companies transporting dangerous goods in the EU must comply with the security provisions based on correct classification, packaging, documentation and certification of goods they move.

Together with GBK GmbH, we can help you meet your obligations for dangerous / hazardous goods, offer EHS support for your products, including GHS labelling and audits, authorizing of SDS, and emergency phone assistance.

Representation Support

We have in-depth experience in working out effective solutions to solve various supply chain challenges related to our clients' representation needs.

Only Representative (OR)

In several countries, importers can appoint a locally based representative who will ensure their products' compliance with all local regulations. Appointing a representative can simplify market access, secure the supply chain and reduce the responsibilities for importers.

We offer representative services for the chemicals markets in the EU, the United Kingdom, South Korea, and Turkey.

SCC is a member of the Only Representative Organisation (ORO) representing the majority of Only Representative service providers in Europe.

Trustee Function under EU REACH

In the EU, non-EU manufacturers and importers of the same substance need to closely work together in order to determine the tonnage of the imported substance per registrant as well as its uses.

SCC, as independent party, can act as a trustee, enabling companies to share legally required information in a compliant manner between the concerned stakeholders.

Consortia Management

Companies planning to authorise/register the same substance can form a consortium and prepare a joint registration by benefitting from sharing the costs for studies and dossier preparation as well as authority fees.

SCC has hands-on experience in managing and providing technical and regulatory support consortia of different size.

With our in-house regulatory and scientific experts, we can assist our clients with all aspects of data and dossier preparation, while legal support is provided by SCC Legal, an independent spin-off of SCC.

Joint Submission Group

When a group of companies intends to manufacture or import the same substance, they can prepare a joint registration to facilitate data sharing and avoid unnecessary testing and costs.

SCC provides complete management for joint submissions, covering all technical, scientific and regulatory aspects, or can represent our clients in consortia and joint registration groups managed by a third party.
